PSD APPLICATION CHECKLIST

(Review and submit with each PSD application)

I. Pre-Ap	I. Pre-Application Submittal Requirements				
	Initial call made to Department to schedule <u>Pre-Application Meeting</u> and discuss applicat requirements				
	Dispersion modeling protocol was submitted to the Department				
	Dispersion Modeling Protocol accepted by Department				
	Pre-construction monitoring was submitted to the Department				
	Pre-construction monitoring accepted by Department				
	Request made to waive pre-construction monitoring, if applicable (Pre-construction monitoring may only be waived if predicted concentrations are below the applicable monitoring de minimus levels)				
	Determined if any support facilities and/or facilities under common control are associated with the facility where project is proposed				
	Documentation to support decision was provided				
	PSD Pre-Application Meeting with Department Representatives				
-	red Application Forms				
Fill out al	ll application forms as directed by the individual form instructions				
	FI: Facility Information				
	Form FI signed by responsible official				
	EU , EU1 , or EU3 : Emission Unit Information (one form required for each emission unit)				
	Include <u>all</u> new and modified emission units. Remember to include ancillary units, such as emergency generators and fire pumps, blackstart engines, cooling towers, painting and solvent cleaning, VOC storage containers, storage piles, material handling, haul roads, etc.				
	<u>CS</u> : Control Equipment and Stack/Vent Information (one form required for each emission point or indoor venting emission unit)				
	EC : Emission Calculations (one form required for each emission point or indoor venting emission unit)				

PSD Application Checklist Page 1 of 4

		iı	•	and/or modified emissions units within the
		<u>MI-1</u> :	: Modeling Information Plot Plan	
		<u>MI-2</u> :		nt Characteristics (include all emissions from or venting units and new and modified emissions
		FRA:	Federal Regulation Applicability	
				ts in this project subject to New Source Performance mission Standards for Hazardous Air Pollutants part labeled.
III.	Emi	ssion	Increases for the Project	
			ssociated emission increases were incl pollutant including emission increases	uded in the calculated net emissions increases for s due to:
			Debottlenecked emission units	
			Increased utilization of emission unit	s
			Fugitive emissions	
All emission increases at any support facilities and/or facilities under common coincluded in the project's net emissions increase				
			mentation supporting emission calcules, etc.) were included with the applica	ations (e.g. engineering estimates, stack test
	Check the pollutants that have a "significant" net emission increase, for this project:			emission increase, for this project:
			Pollutant	"Significant" Net Emission Increase
			Particulate matter (PM)	> 24.4 tpy
			PM_{10}	> 14.4 tpy
			Sulfur dioxide (SO ₂)	> 39.4 tpy
			Nitrogen oxides (NO _X)	> 39.4 tpy
			Ozone (Volatile organic compounds (VOC))	> 39.4 tpy
			Carbon Monoxide (CO)	> 99.4 tpy
			Lead (elemental)	> 0.54 tpy
			Fluorides	> 2.4 tpy

PSD Application Checklist Page 2 of 4

			Sulfuric acid mist	> 6.4 tpy	
			Total reduced sulfur compounds (including H_2S)	> 9.4 tpy	
			CFC's 11, 12, 113, 114, 115	> 0 tpy	
			Halons 1211, 1301, 2402	> 0 tpy	
			Municipal Waste Combustor (MWC) acid gases	> 39.4 tpy	
			MWC metals	> 14.4 tpy	
			MWC Organics	$> 3.44 \times 10^{-6} \text{ tpy}$	
			Other pollutants regulated under the CAA (§52.21(b)(23)(ii))	> 0 tpy	
			Opacity – Visible Emissions		
IV. BAC		CT Analysis			
		A "top-down" BACT analysis was performed for each new or modified emission unit that source of a pollutant that has a "significant" net emission increase.			
			Submitted documentation supporting BAC	T analysis	
V. D	isper	sion N	Modeling Analysis		
		Potential ozone plumes were evaluated for projects with VOC emissions over 100 tons pe year.			
			rmined if modeled concentrations of any PS eling significance level (MSL).	SD pollutant were above the applicable	
			If yes, full impact analyses were conducted PSD Increment values.	d to evaluate compliance with the NAAQS and	
			Documentation for the source inventories impact analyses was provided.	used for NAAQS and PSD increment in the full	
			ronic files associated with all applicable mo ficance levels and full impact analyses) on a ette).		

PSD Application Checklist Page 3 of 4

VI.	I. Additional Impacts Analysis				
		A Class I visibility impacts analysis was completed.			
		Potential impacts on endangered or sensitive species located in Class I areas that may be affected by the proposed project were evaluated if applicable, and all necessary documentation is included with the application.			
		A Class II visibility impacts analysis was completed.			
		A hard copy of the VISCREEN output is included with the application.			
		VISCREEN input and output files are provided on appropriate media (i.e. CD or diskette).			
		Impacts on soils and vegetation were considered, including impacts of NO_X over short-term periods and the combined impact of NO_X in conjunction with SO_2 .			
		An air quality analysis for associated growth from the proposed project was conducted, if applicable, and all necessary documentation is included with the application			
VII.	Prop	posed Permit Conditions			
	Is the	e facility proposing any of the following permit conditions:			
		Emission limits (including applicable averaging periods)			
		Test methods			
		Compliance demonstration methods			
		Monitoring requirements for all averaging periods			
		Recordkeeping requirements for all averaging periods			
VIII.	Misc	ellaneous			
		Submitted four copies of the entire application (five copies of the entire application are necessary if the facility is locating in Linn or Polk County)
